FMB

Fuzz Magic Box

The FMB Fuzz Magic Box was designed to solve the problem when interfacing old fuzz pedals with buffers.

The characteristic sound of old fuzz pedals was traditionally destroyed when placing a buffer in front or after the fuzz pedal.

The FMB rectifies that problem.

Place the FMB between the output of the buffer and the input of the fuzz pedal, and the original sound of your fuzz pedal will be preserved.

The FMB is a passive unit, requiring no power supply.

With the MODE switch you have access to two different types of frequency ranges.

Not all fuzz pedals react identical to a buffer, but it is our experience that 95% of all fuzz pedals will work perfectly with one of the two available settings.

The FMB features our unique RFI/EMI protection, and only the highest quality of components is used. All ¼" jack bushings used are gold-plated, and all internal wiring utilizes high quality screened audio cable with minimum dc resistance and capacity.

Warranty:

Should the unit require repair within the 2-year warranty, please send the unit to us and we will resume responsibility for repair service, provided the unit has not been misused in any way. Opening or modifying the unit will void the warranty.

This warranty does not apply to any additional equipment that has been connected to this unit.

We reserve the right to make changes in design and/or improvements upon this product, without any obligation to include changes in any products previously manufactured. This unit is hand built and tested by Steen Skrydstrup.
